## **Bank Reconciliation Module in PICS is Ready to Go!**

We have some good news to share ...

For the last 3 months we have been hard at work finishing the bank reconciliation module in PICS. We are happy to announce that it is ready for release. Download [PICS Bank Reconciliation Documentation](#).

When you get your next build of PICS, this new code will be in it.

While we hope you decide to implement the new bank reconciliation module (please let us know if you want to find out more), we also need to let you know that the AR Receipts, AR import from TWPA, AR generic import, Sales Order Batch update and Create AR screens HAVE CHANGED so as to be able to create deposits in PICS. The default settings on these screens are to do nothing, so if you just use them as before you shouldn't see any difference in functionality. However, the screens have changed, so please be aware.

Please see the bottom of page 4 through page 13 in the download for details on the changes to the above mentioned screens.

Thanks,

WaudWare Support
