New! Automatic Exchange Rate Changes in PICS

We have created a CodeRunner script that can be scheduled to automatically obtain the latest exchange rate(s) from https://currencylayer.com/ and update the rate(s) in Produce Inventory Control System (PICS) software.

Note that we have allowed for an optional ability to "pad" this rate for AR and/or AP with a user defined adder percentage in the event that you like to make the rates higher in PICS than the actual exchange rate.

While we're on the topic of money... are you using the **Bank Reconciliation Module** in PICS that we launched earlier this year? It's comprised of two main screens - Bank Deposits and Bank Reconciliation. Read more about the Bank Reconciliation Module.

Contact WaudWare Support to learn more or start using these features!
